Hello,
I finally got my MorphOS system working on a PowerMac G5, since i can't use my existing AmigaOS version how do i get the registered CygnusEd 5.1 for MorphOS.

I have downloaded the demo version but would prefer a full version.

Regards

Shaf

As far as I know there is no MorphOS version of CygnusEd 5.

But the 68k version runs just fine. Just install it from the CD you bought or copy the CygnusEd drawer from your 68k Amiga to your MorphOS harddrive.
